UNIVERSITY**

Hierarchy of Molecular Dynamics Methods

$$m_i \frac{d^2 \mathbf{r}_i}{dt^2} = -\frac{\partial}{\partial \mathbf{r}_i} E_{\text{MD}}(\{\mathbf{r}_i\})$$

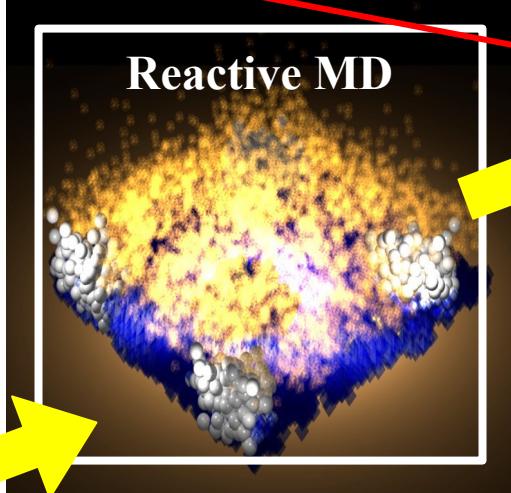

$$\min E_{\text{QM}}(\{\psi_n(\mathbf{r})\})$$

Electron wave function

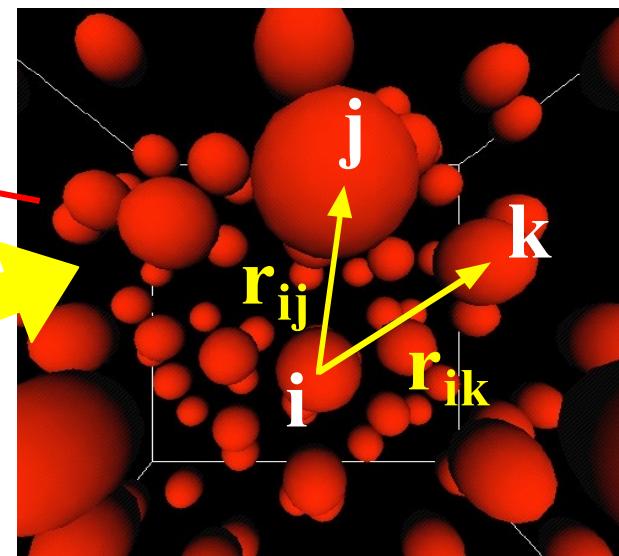

Quantum Mechanics (QM)

Atom

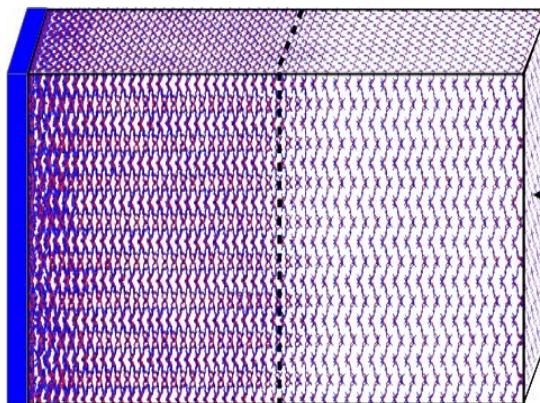

Molecular Dynamics (MD)

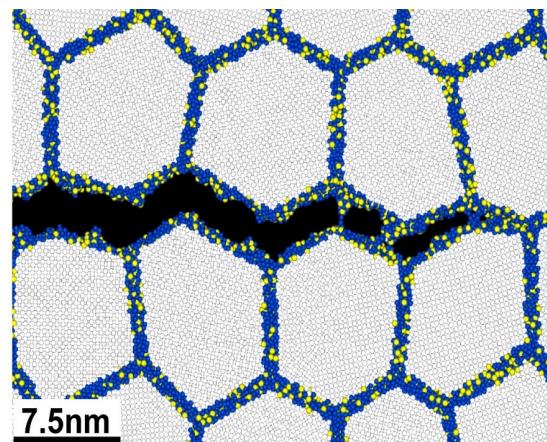

- MD with empirical interactions $\sim O(N)$
Long-time (10^9 steps) & large size (10^{12} atoms)
- DFT quantum MD $\sim O(N^3)$
Short-time (10^4 steps) & small size (~ 400 atoms)
- Divide-and-Conquer QMD $\sim O(N)$: Al/Li nanoparticle in water using 16K atoms for 30,000 steps

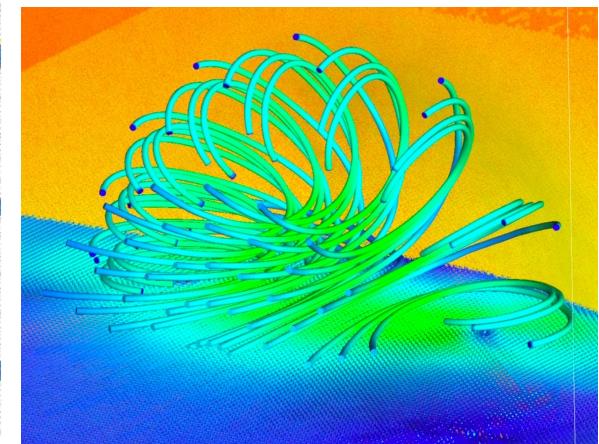

Large-Scale Reactive MD Simulations

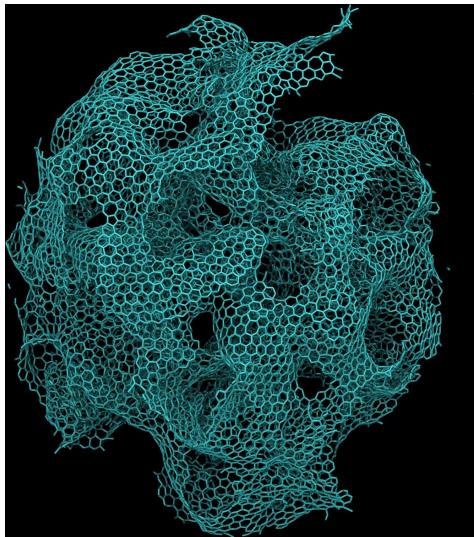

Shock-induced chemical reaction

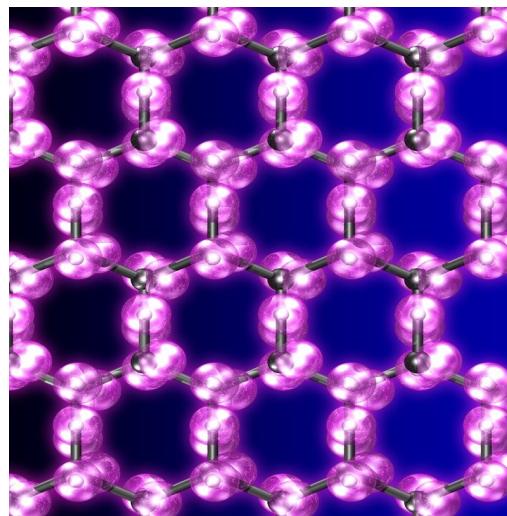

Stress corrosion cracking

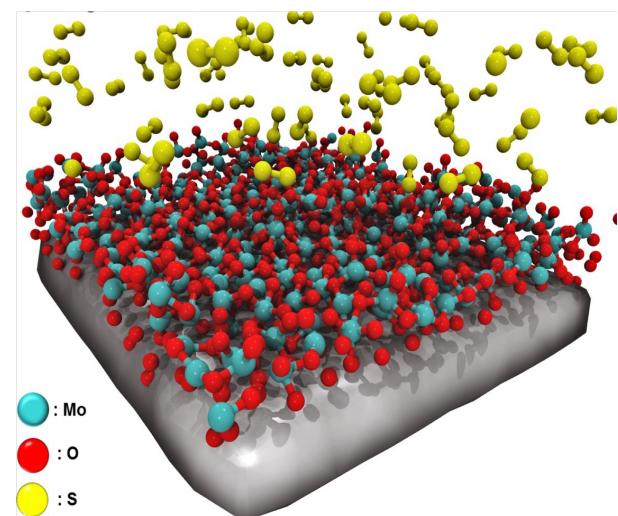

Underwater bubble collapse

Oxidation of nanoparticle

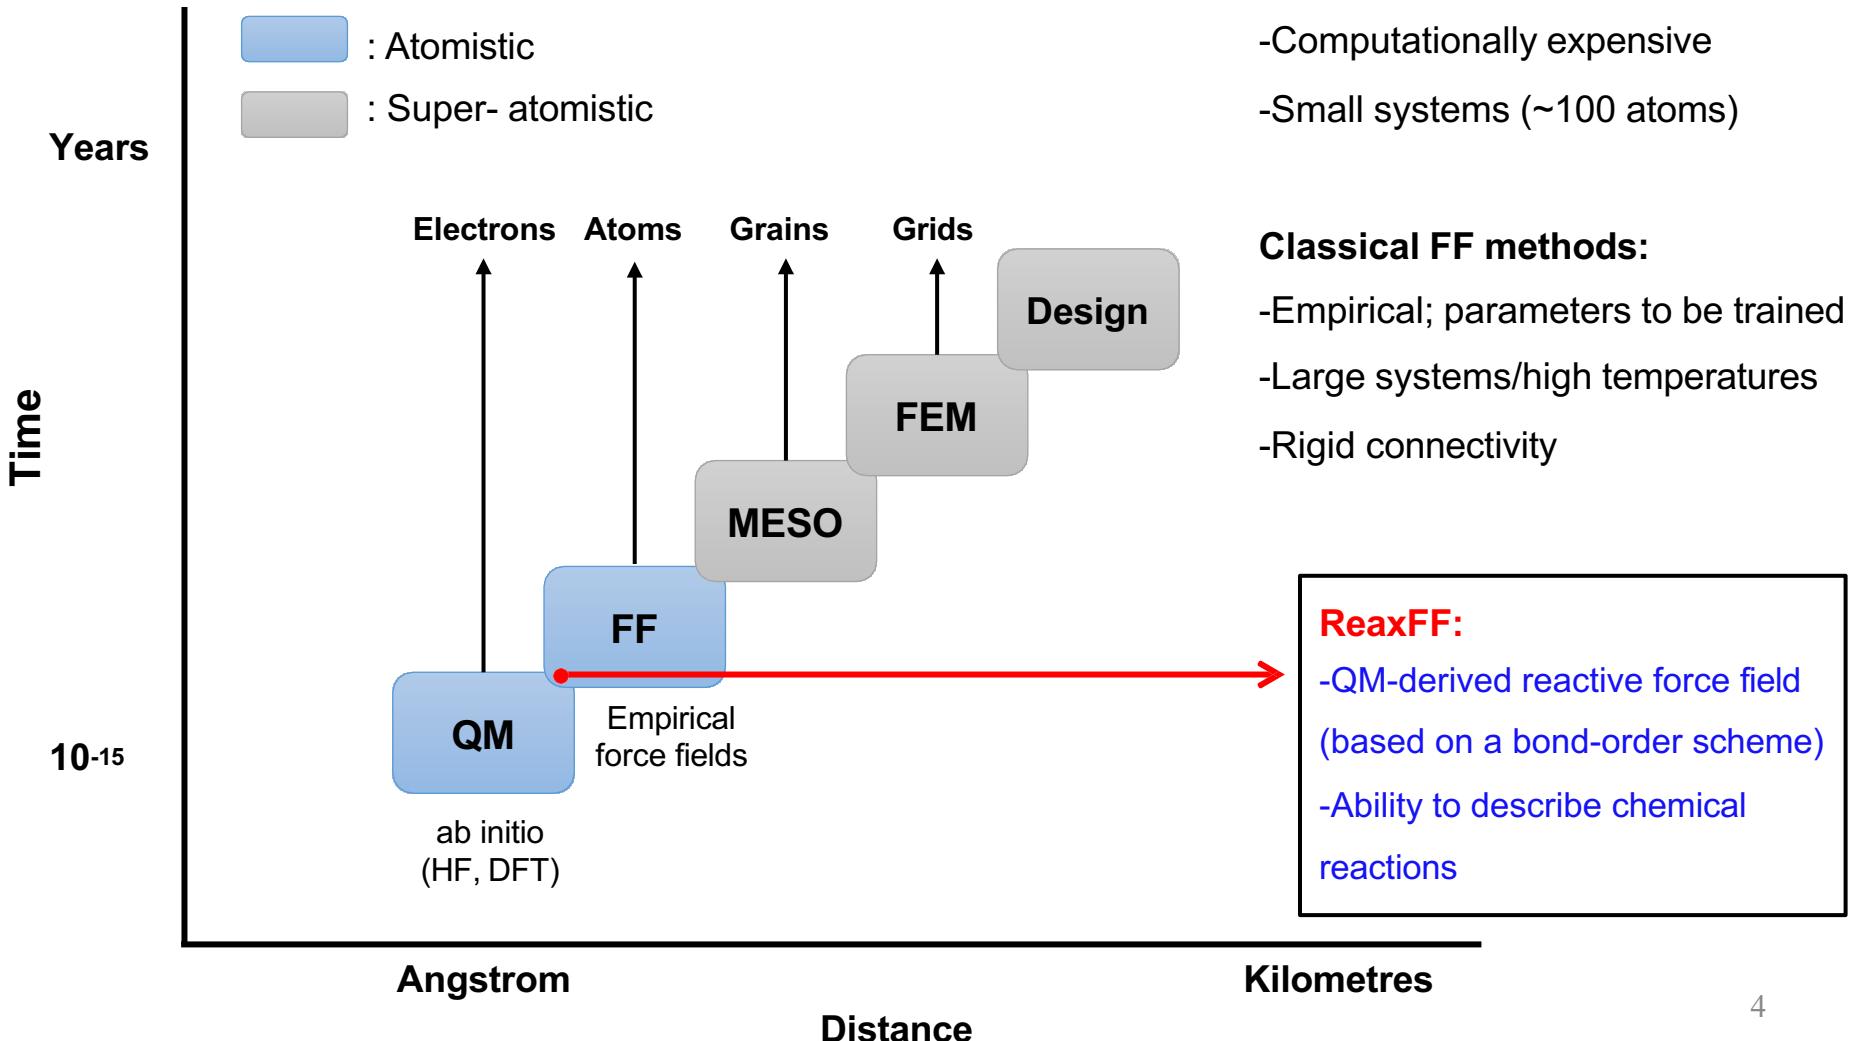

Dielectric polymers

2D material synthesis

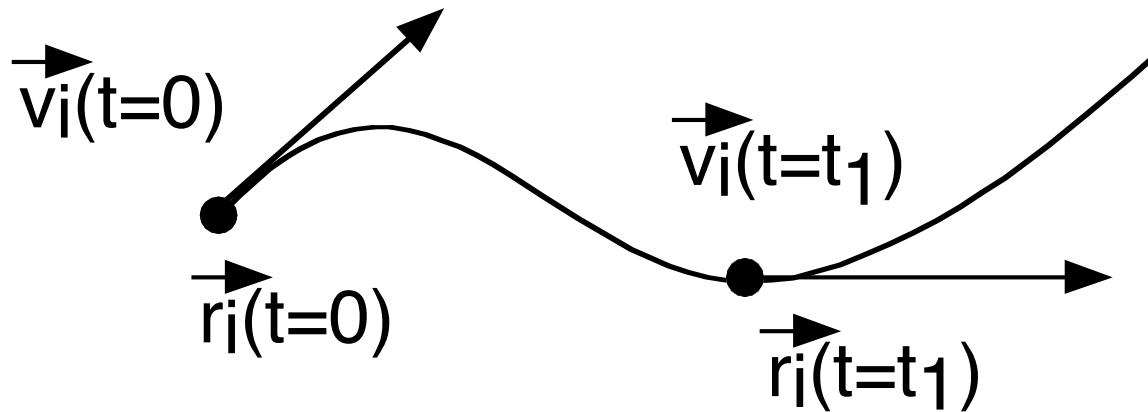

Basic Concepts of ReaxFF Forcefield

• Multi-scale Computational Modeling

Basic Concepts of ReaxFF Forcefield

- What is Molecular dynamics (MD) simulation?

Numerically solve Newton's
equation of motion

$$\vec{F}(t) = m \frac{d^2 \vec{r}_i}{dt^2} = - \frac{d}{d \vec{r}_i} V(\vec{r}_i \dots \vec{r}_N)$$

Interatomic potential; force field

Basic Concepts of ReaxFF Forcefield

- ReaxFF general energy terms*

$$E_{\text{system}} = E_{\text{bond}} + E_{\text{over}} + E_{\text{val}} + E_{\text{tors}} + E_{\text{vdWaals}} + E_{\text{Coulomb}}$$

The equation is shown with a large brace underneath grouping all terms from E_{bond} to E_{Coulomb} . This large brace is further divided by a smaller brace under E_{bond} , E_{over} , E_{val} , and E_{tors} which is labeled "Bonded interactions" in red. The remaining terms E_{vdWaals} and E_{Coulomb} are grouped by another small brace and labeled "Non-bonded interactions" in red.

E_{bond} : Bond energy; two-body attractive term

E_{over} : Over-coordination energy; penalty for overcoordinating atoms

E_{val} : Angle strain energy; three-body term

E_{tors} : Torsion energy; four-body term

E_{vdWaals} : van der Waals interactions

E_{Coulomb} : Coulomb interactions

*van Duin, Adri CT, et al. *The Journal of Physical Chemistry A* **105** (2001): 9396-9409.

Basic Concepts of ReaxFF Forcefield

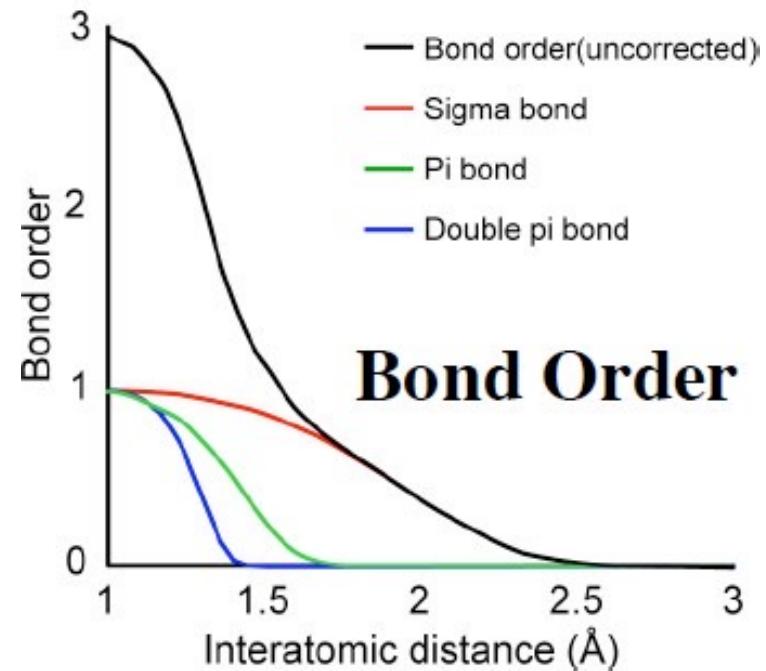

- Key features of ReaxFF – 1*

- A bond order is calculated and updated every step, thus allowing for chemical reactions during MD simulations.

A bond-order/distance relationship

$$BO_{ij} = \exp \left[p_{bo,1} \cdot \left(\frac{r_{ij}}{r_o^\sigma} \right)^{p_{bo,2}} \right] + \exp \left[p_{bo,3} \cdot \left(\frac{r_{ij}}{r_o^\pi} \right)^{p_{bo,4}} \right] + \exp \left[p_{bo,5} \cdot \left(\frac{r_{ij}}{r_o^{\pi\pi}} \right)^{p_{bo,6}} \right]$$

C-C bond order

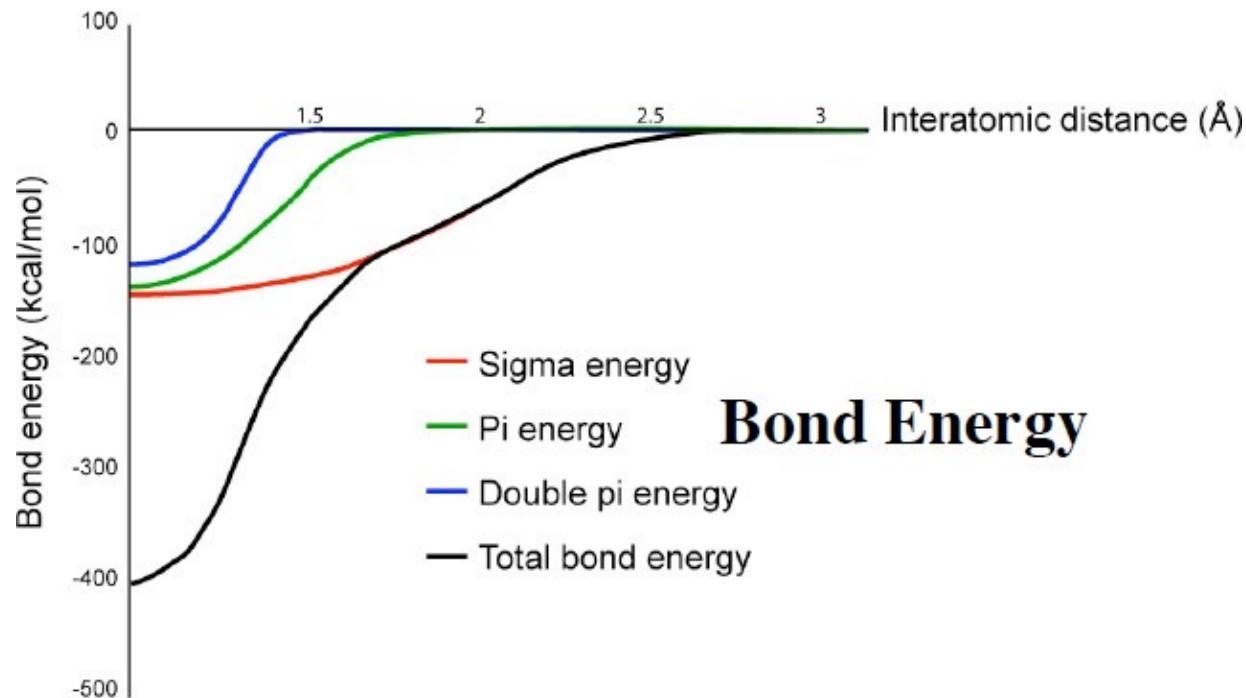

*Russo, Michael F., and Adri CT van Duin. *Nuclear Instruments and Methods in Physics Research Section B: Beam Interactions with Materials and Atoms* **269** (2011): 1549-1554.

Basic Concepts of ReaxFF Forcefield

- Key features of ReaxFF – 2*

- All bonded-interactions are made of bond-order dependent.

$$E_{bond} = -D_e^\sigma \cdot BO_{ij}^\sigma \cdot f(BO_{ij}^\sigma) - D_e^\pi \cdot BO_{ij}^\pi - D_e^{\pi\pi} \cdot BO_{ij}^{\pi\pi}$$

*Russo, Michael F., and van Duin, Adri. *Nuclear Instruments and Methods in Physics Research Section B: Beam Interactions with Materials and Atoms* **269** (2011): 1549-1554.

Basic Concepts of ReaxFF Forcefield

- Key features of ReaxFF – 3*

- Non-bonded interactions (van der Waals and Coulomb) are calculated between every atom pair. (*i.e.*, no exception)
- ReaxFF employs the QEq method,** a geometry-dependent point charge calculations scheme, to update point charges for the entire system.

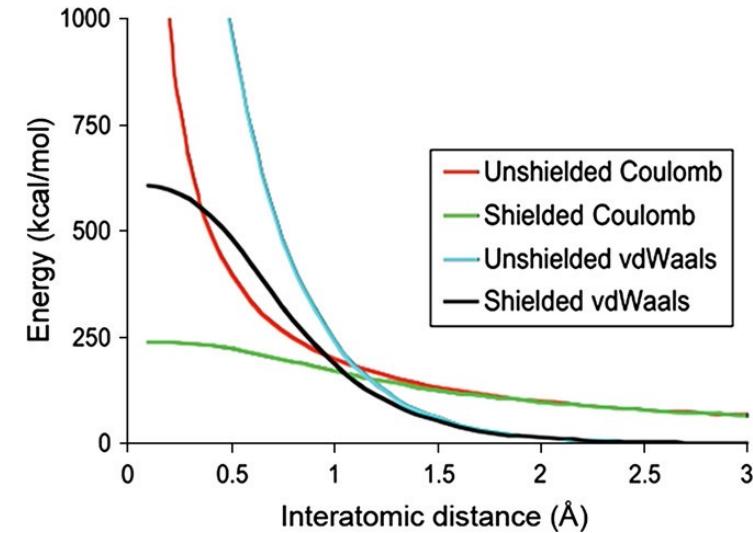

$$E_{vdWaals} = Tap \cdot D_{ij} \cdot \left\{ \exp \left[\alpha_{ij} \cdot \left(1 - \frac{f_{13}(r_{ij})}{r_{vdW}} \right) \right] - 2 \cdot \exp \left[\frac{1}{2} \cdot \alpha_{ij} \cdot \left(1 - \frac{f_{13}(r_{ij})}{r_{vdW}} \right) \right] \right\}$$

A shielded Morse potential

$$f_{13}(r_{ij}) = \left[r_{ij}^{p_{vdW1}} + \left(\frac{1}{\gamma_w} \right)^{p_{vdW1}} \right]^{\frac{1}{p_{vdW1}}}$$

$$E_{Coulomb} = C \cdot \frac{q_i \cdot q_j}{[r_{ij}^3 + (1/\gamma_{ij})^3]^{1/3}}$$

A shielded Coulomb potential

Rappe, Anthony K., and William A. Goddard III. *The Journal of Physical Chemistry* **95 (1991): 3358-3363.

Basic Concepts of ReaxFF Forcefield

Key features of ReaxFF – 4**

- Charge-equilibration (QE_q)
→ Charge transfer

Determine atomic charges
 $\{q_i \mid i = 1, \dots, N\}$ every MD step
to minimize $E_{\text{ES}}(\mathbf{r}^N, q^N)$ with
charge-neutrality constraint:
 $\sum_i q_i = 0$

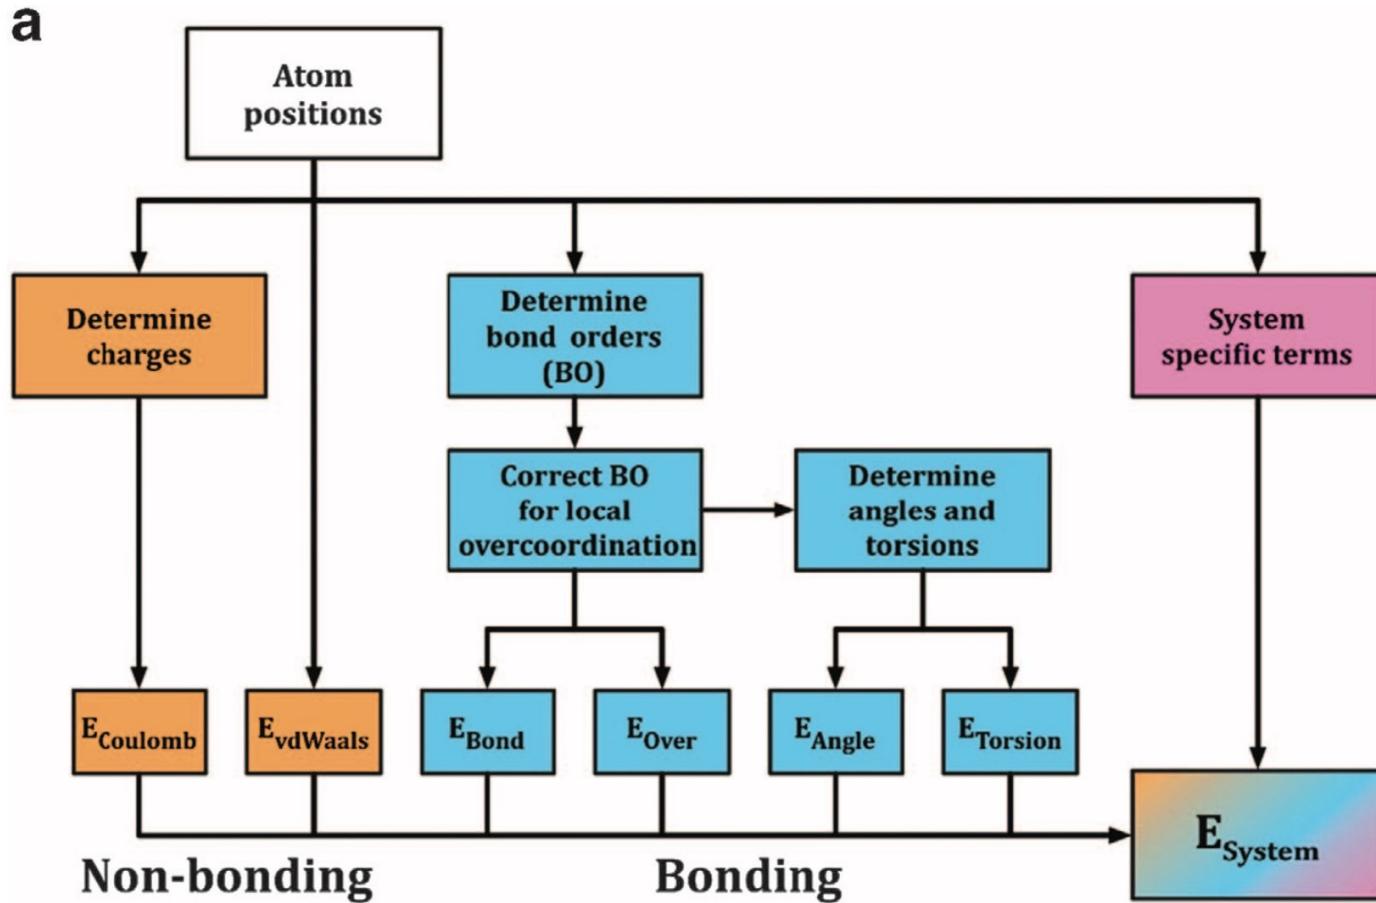

O₂ dissociation on Al(111)

$$E_{\text{ES}}(\mathbf{r}^N, q^N) = \sum_i \left(\chi_i q_i + \frac{1}{2} J_i q_i^2 \right) + \sum_{i < j} \int d\mathbf{x} \int d\mathbf{x}' \frac{\rho_i(q_i; \mathbf{x} - \mathbf{r}_i) \rho_j(q_j; \mathbf{x}' - \mathbf{r}_j)}{|\mathbf{x} - \mathbf{x}'|}$$

Basic Concepts of ReaxFF Forcefield

CyberMAGICS MD Software

QXMD: Quantum dynamics software with non-adiabatic extensions

RXMD: Reactive molecular dynamics software for desktop to supercomputing platforms

Sulfurdization of MoO_3 nanoflake

Electron transfer in light-harvesting molecule

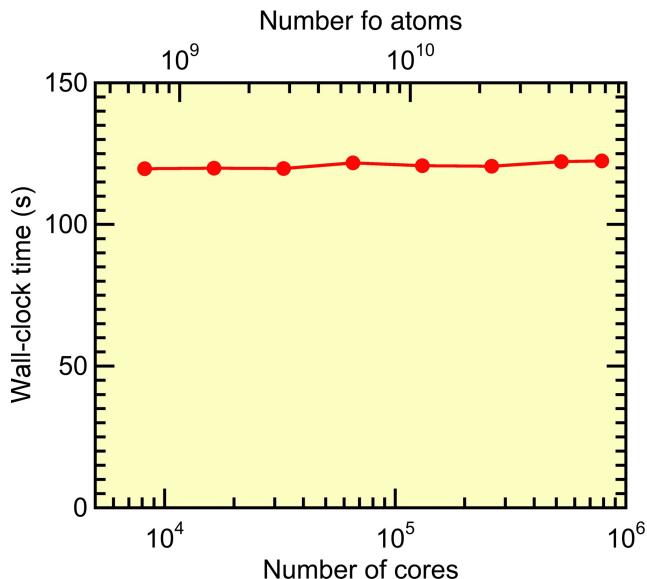

Extended-Lagrangian Method

- Eliminated speed-limiting iteration for charge-equilibration (QE_q) in ReaxFF by adapting an extended-Lagrangian scheme proposed for QMD

$$L_{\text{XRMD}} = L_{\text{RMD}} + \frac{\mu}{2} \sum_i \dot{\theta}_i^2 - \frac{\mu \omega^2}{2} \sum_i (\theta_i - q_i)^2$$

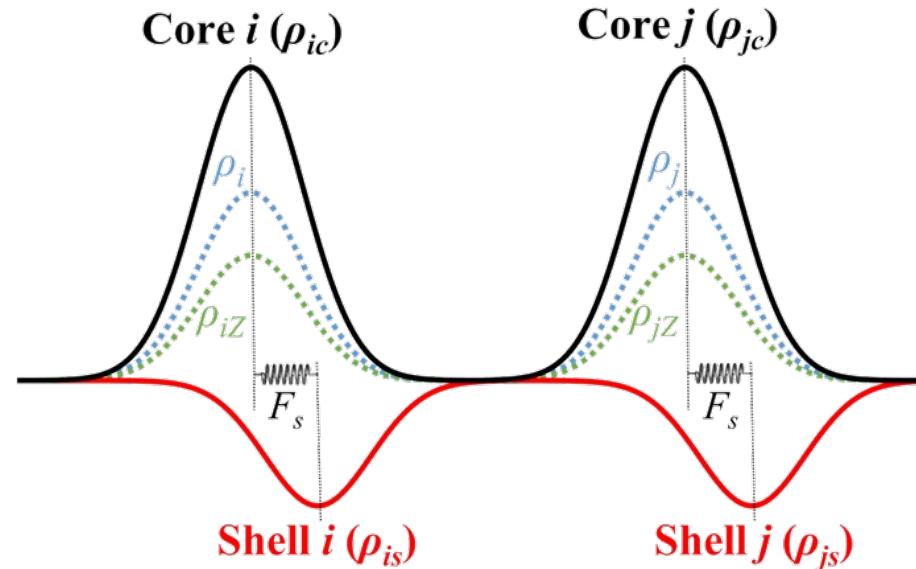

Auxiliary charge: dynamic variable
Physical charge

- Extended-Lagrangian RXMD achieves 8.6x speed up with the same energy conservation as fully converged QE_q
- Parallel efficiency 0.977 on 786,432 Blue Gene/Q cores for 67.6 billion atoms

Polarizable Charge Equilibration (PQEeq) Method

- PQEeq method has been implemented in RXMD to study dielectric response as a function of time, electric field and temperature.
- Each atom is partitioned into two charged sites, i.e., core and shell
- The core consists of variable charge ρ_i and with fixed charge ρ_{iz}
- The shell is connected with the core by an isotropic harmonic spring with force constant F_s

self energy of *i*-atom

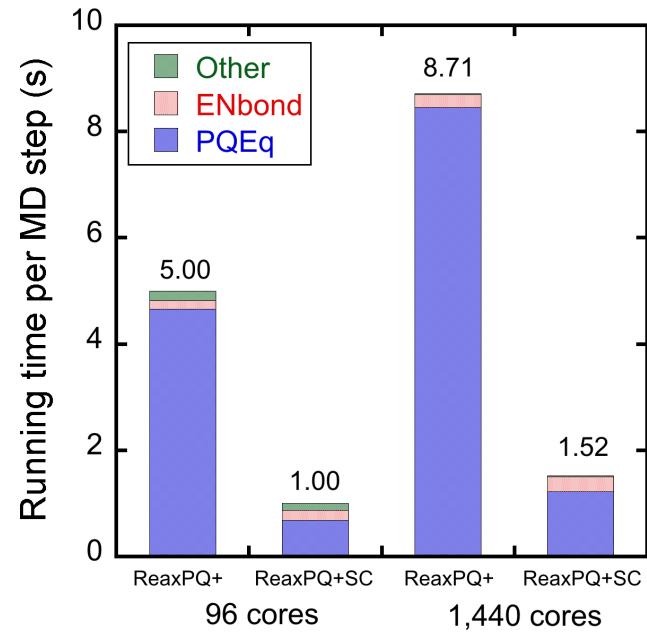

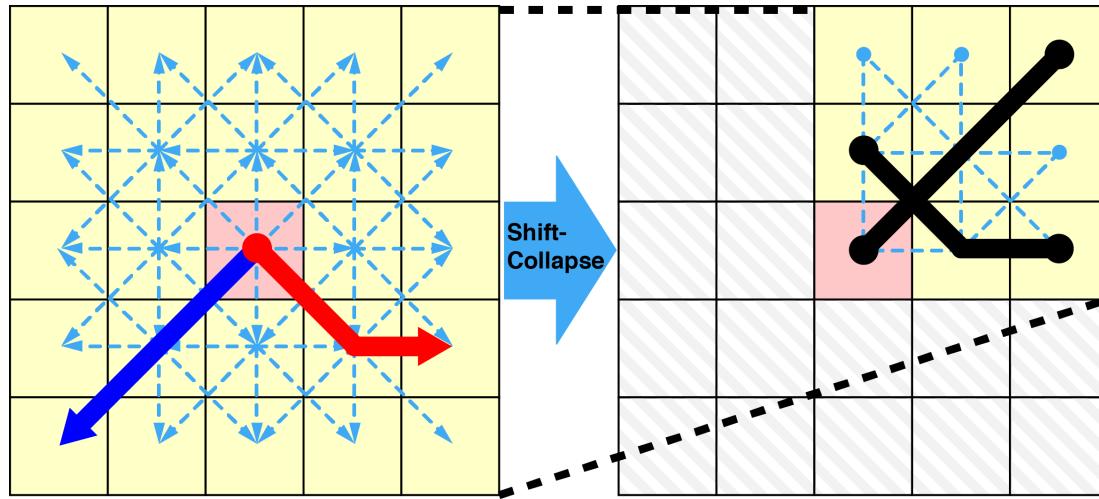

$$E(\{\vec{r}_{ic}, \vec{r}_{is}, q_i\}) = \sum_i^N \left\{ E_i^0 + \chi_i^0 q_i + \frac{1}{2} J_{ii}^0 q_i^2 + \boxed{\frac{1}{2} K_s r_{ic,is}^2} \right\}$$

core-shell interaction on *i*-atom

$$+ \sum_{i>j} [C(\vec{r}_{ic,jc})q_{ic}q_{jc} - C(\vec{r}_{ic,js})q_{ic}Z_j - C(\vec{r}_{is,jc})q_{jc}Z_i + C(\vec{r}_{is,js})Z_iZ_j]$$

core-shell interaction between *i*- and *j*-atoms

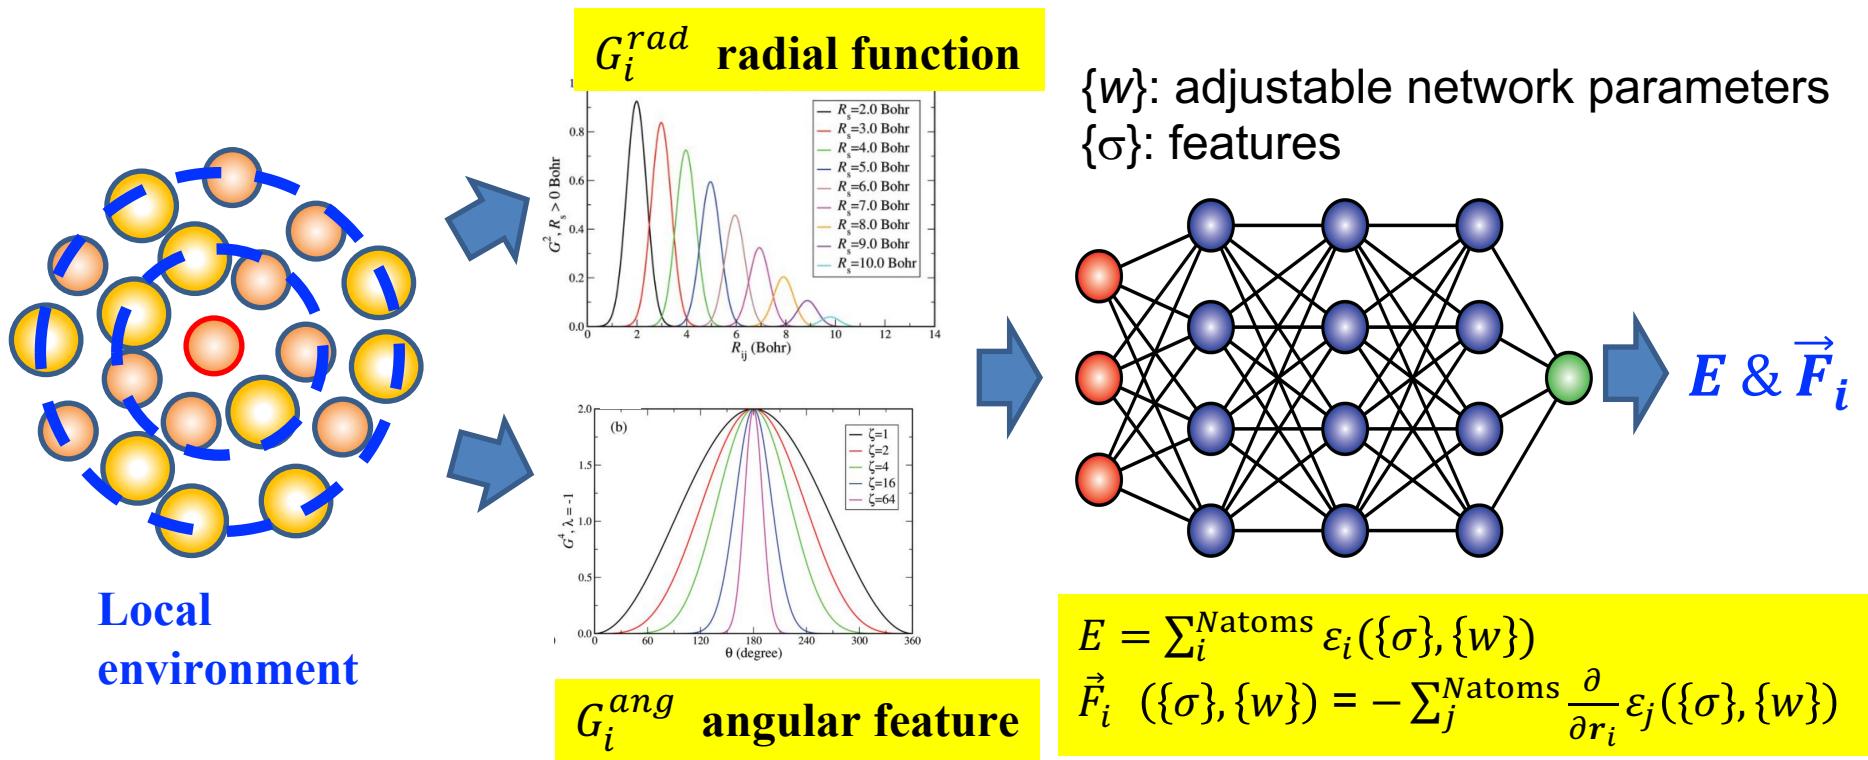

Shift-Collapse (SC) Algorithm for Time-to-Solution

- SC algorithm generates optimal computation pattern for general finite-range n -tuple energy/force computations.
- SC-accelerated PQEq+SC achieves 5.0x speedup compare to the original PQEq.

RXMD-NN (Neural Network Molecular Dynamics)

- Use fully-connected neural network to predict atomic energy and force
- Radial and angular symmetric functions to capture local atomic environment

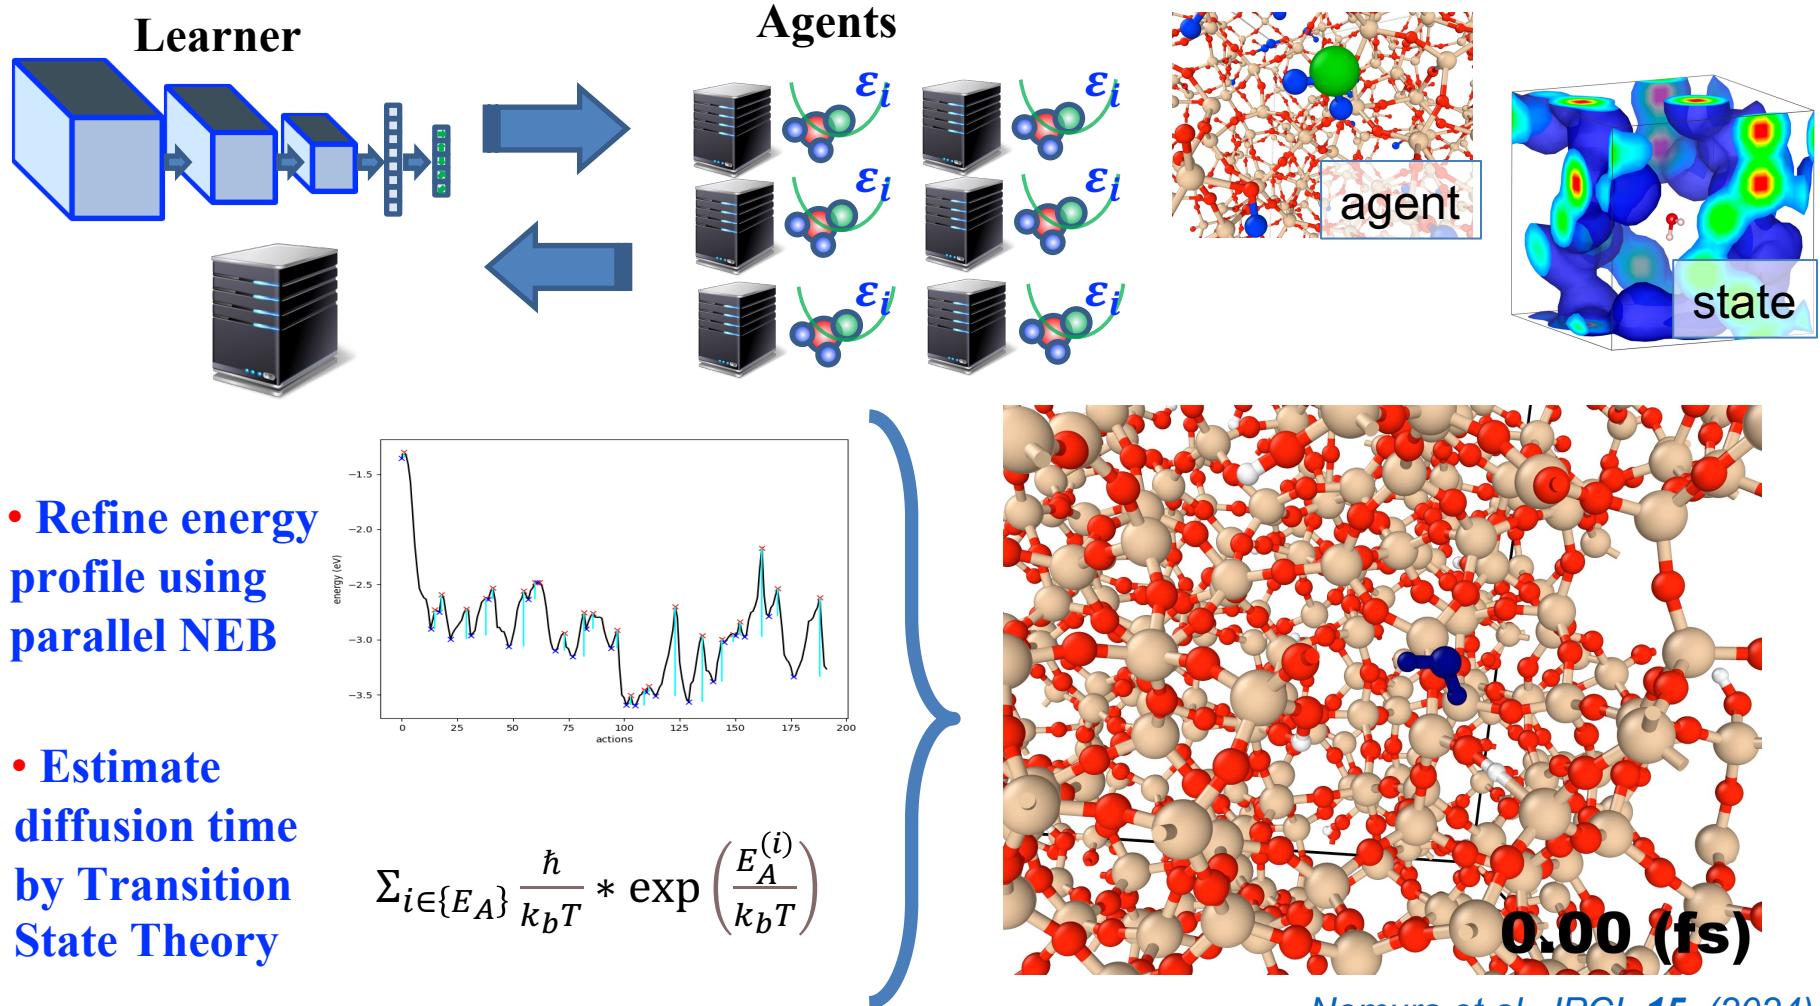

**Allegro
Legato**

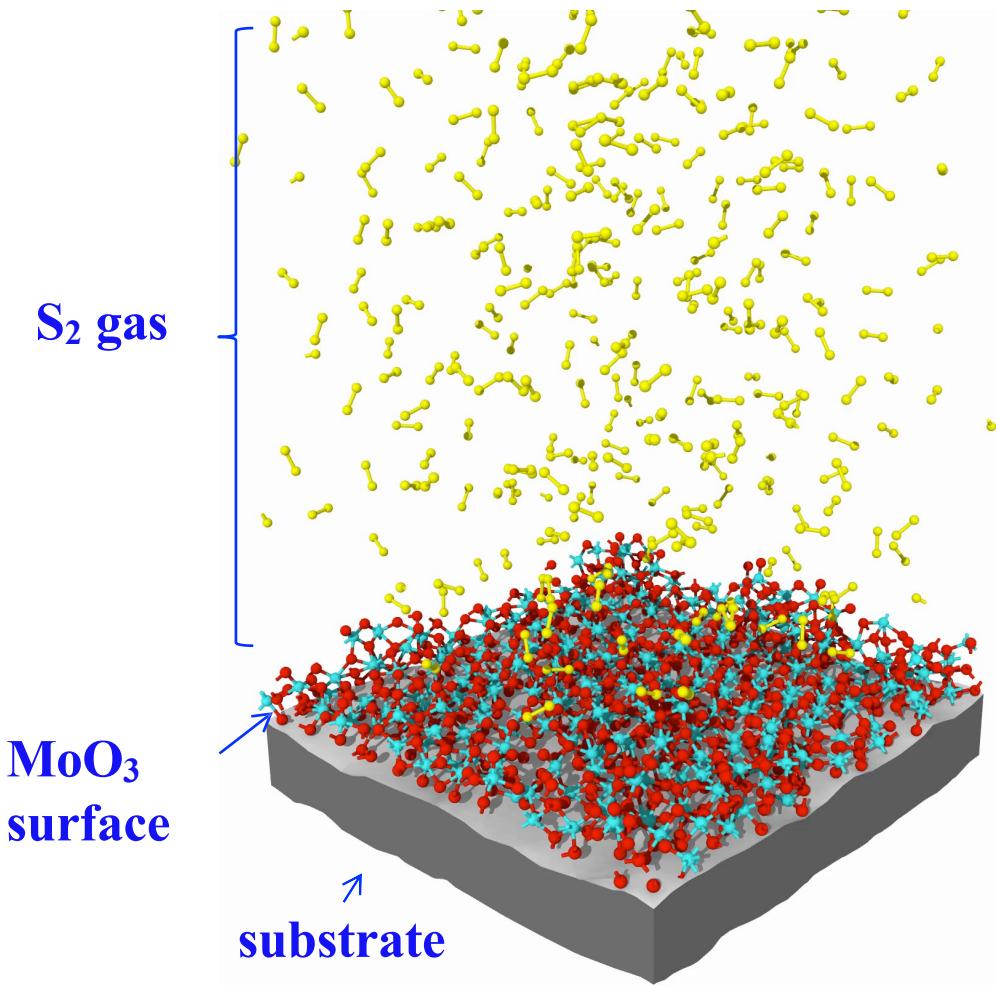

- E(3)-equivariant network and sharpness-aware minimization technique for fidelity scaling

Molecular Autonomous Agent using Deep Reinforcement Learning

- A scalable RL framework to study molecular diffusion at experimentally relevant time scale

RMD Simulations of MoS₂ Monolayer Synthesis

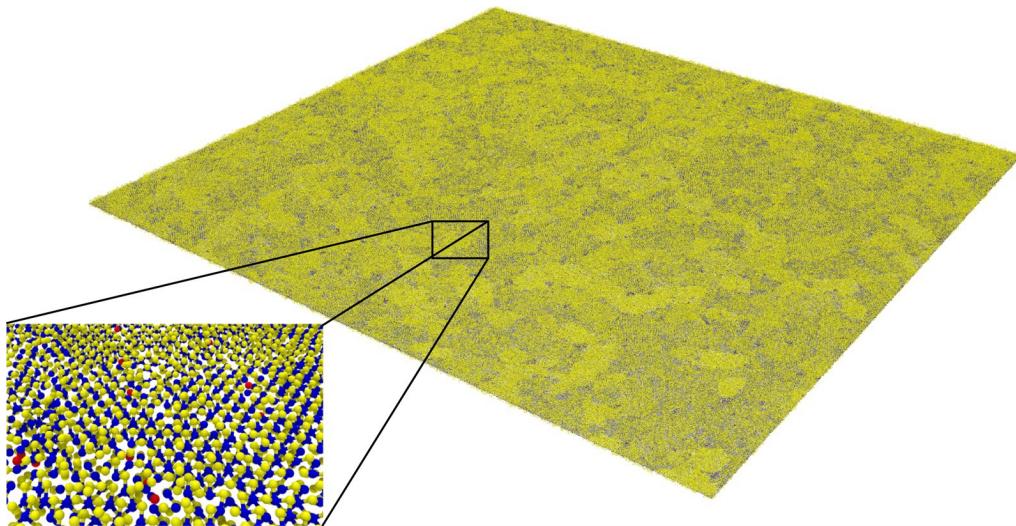

High-temperature
sulfurdization of MoO₃
monolayer with S₂ gas

Step 1. O₂ evolution
from a MoO₃ surface

Step 2. SO/SO₂
formation from a
MoO_{2.6} surface

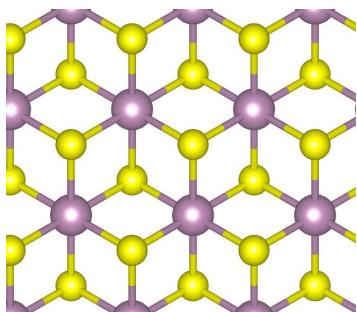

Step 3. Mo-S bond
formation on MoO_xS_y

MoS₂ Crystal Growth Simulation

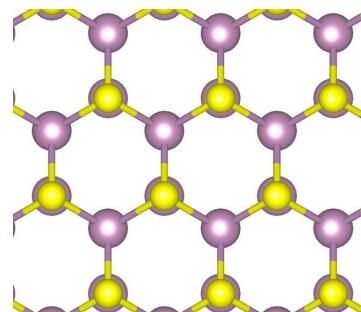

- Number of atoms:
4,305,600 atoms (1,497,600 O; 2,347,200 S and 460,800 Mo)
- System dimensions:
 $211.0 \times 196.3 \times 14.5$ (nm³)
- Timestep: 0.75 fs.

1T Structure

2H Structure

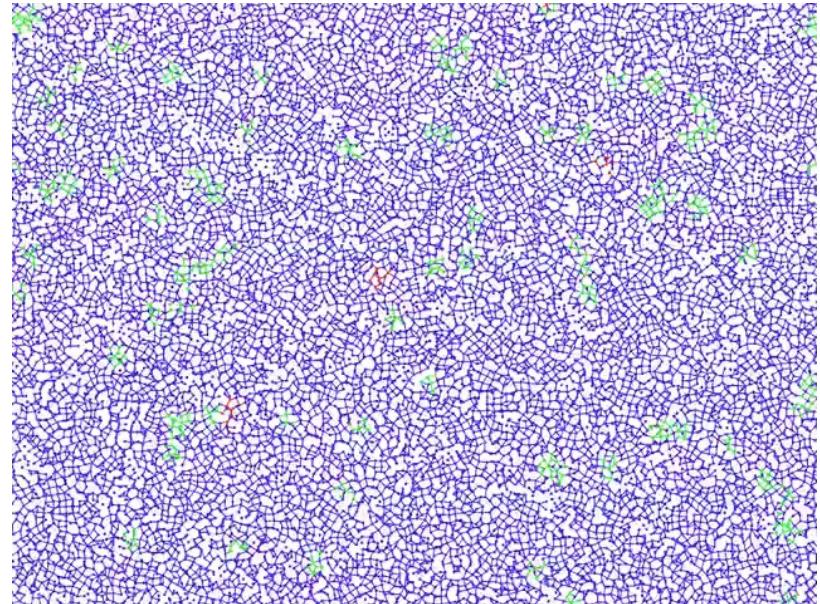

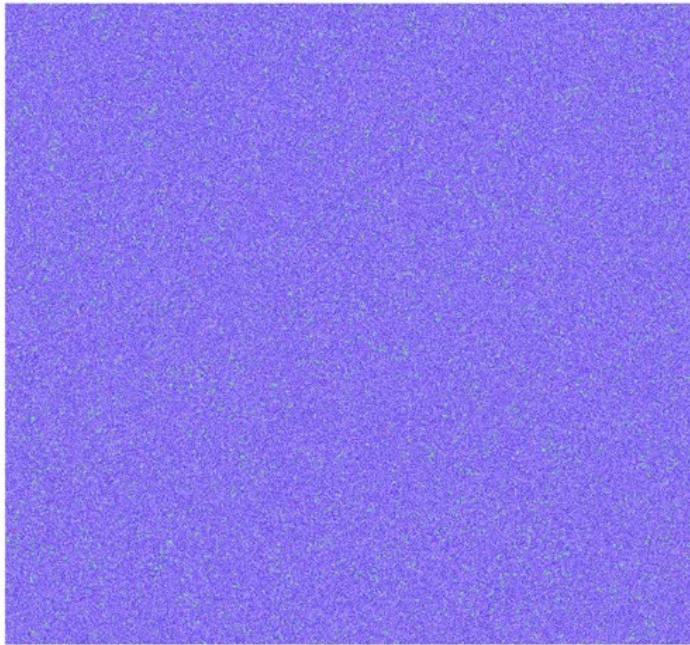

Sulfur

Molybdenum

The pre-sulfurized MoS slab is thermalized at 3000K for 1 nsec, quenched to 1000K, then subjected to temperature cycle to improve its crystallinity.

Grain Growth by Annealing

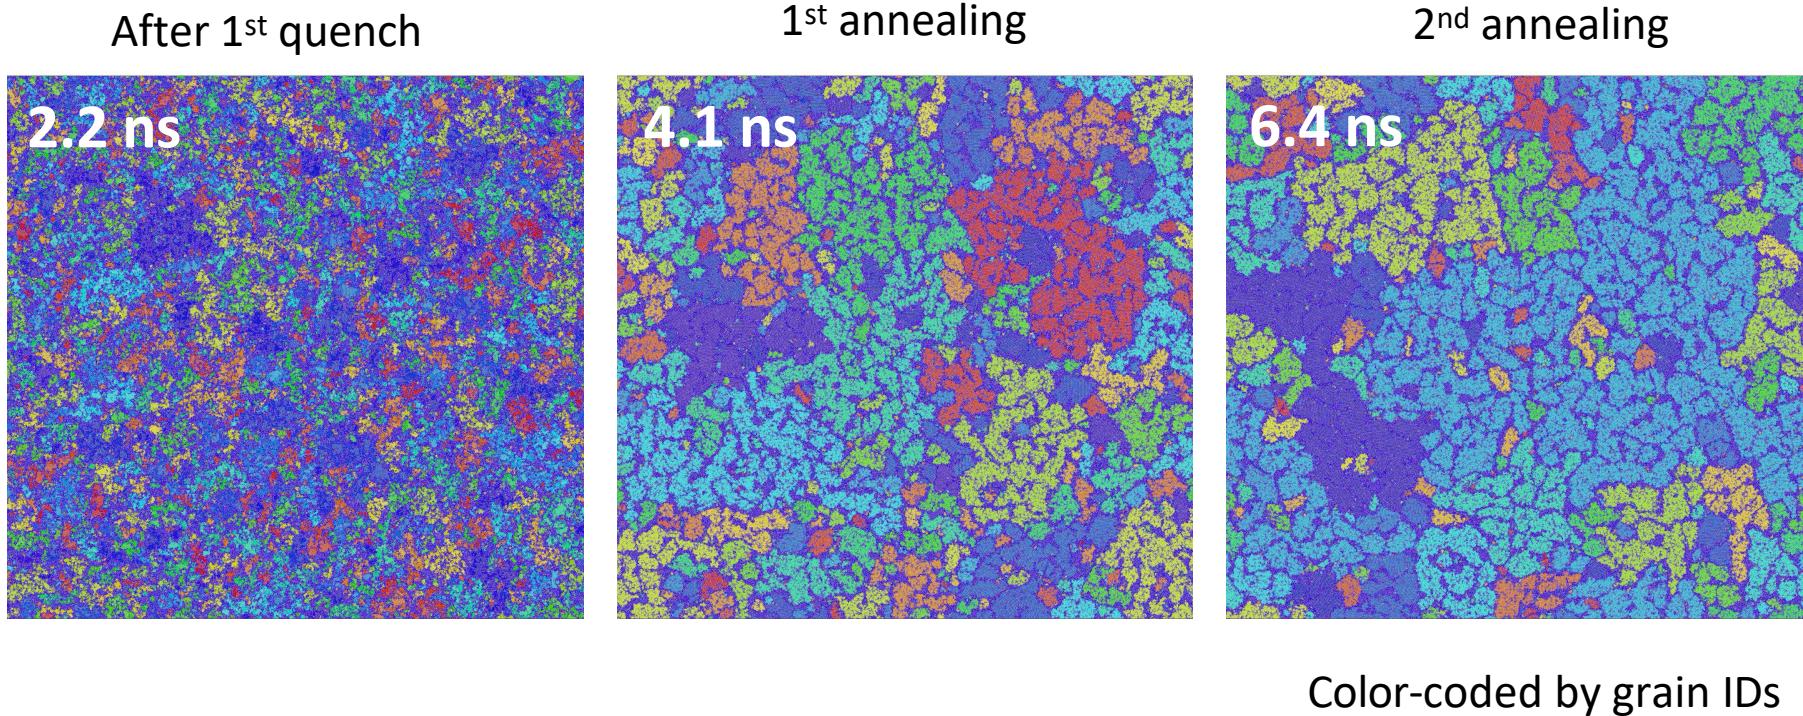

Zoom-in view

● 1T ● 2H ● disordered

- Atoms in the sulfurdized slab are classified into 1T, 2H and disordered phases.
- Areas of connected 2H phase atoms indicates MoS_2 crystal grains, separated by 1T or disordered phases.

Grain Growth by Annealing

- Highly disordered structure is obtained by the rapid quenching at 2.2ns.
- Grain growth and crystallinity improvement at 6.4 ns due to the active grain boundary migration.
